

**AN INTELLIGENT
REMOTE MONITORING SYSTEM
FOR DAM SAFETY**

Unpong Supakchukul

National Electronics and Computer Technology Center

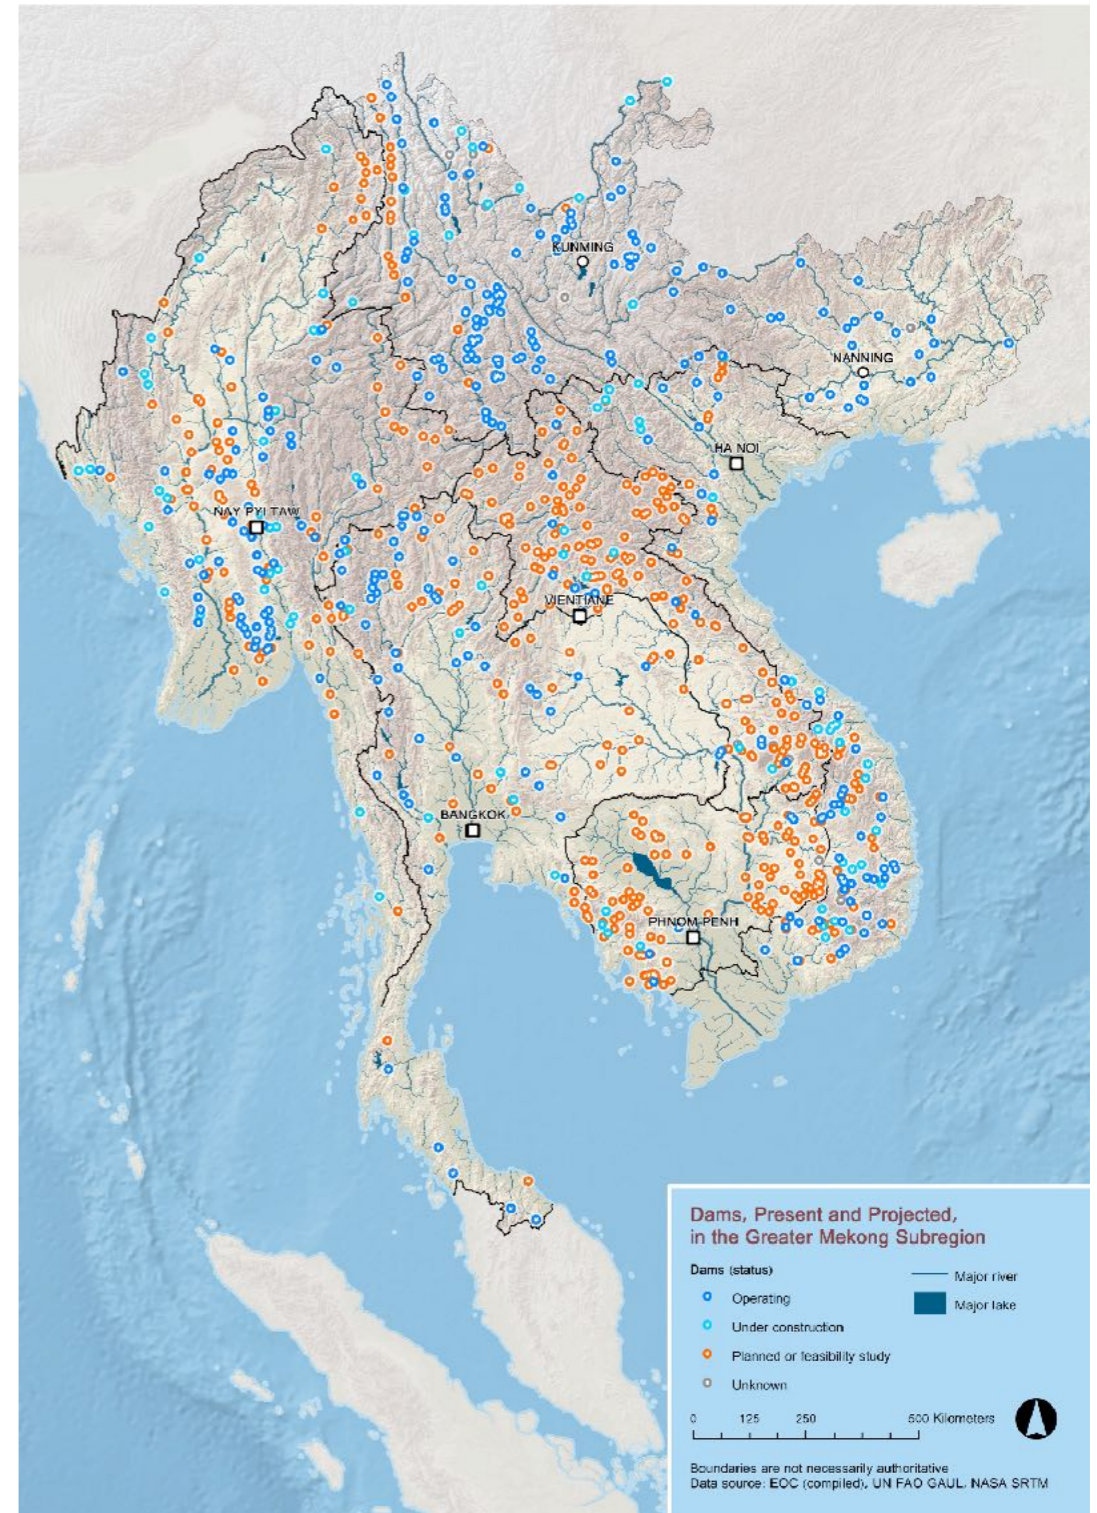

(NECTEC)

OUTLINE

- Background
- Objectives and Output
- Q&A

BACKGROUND

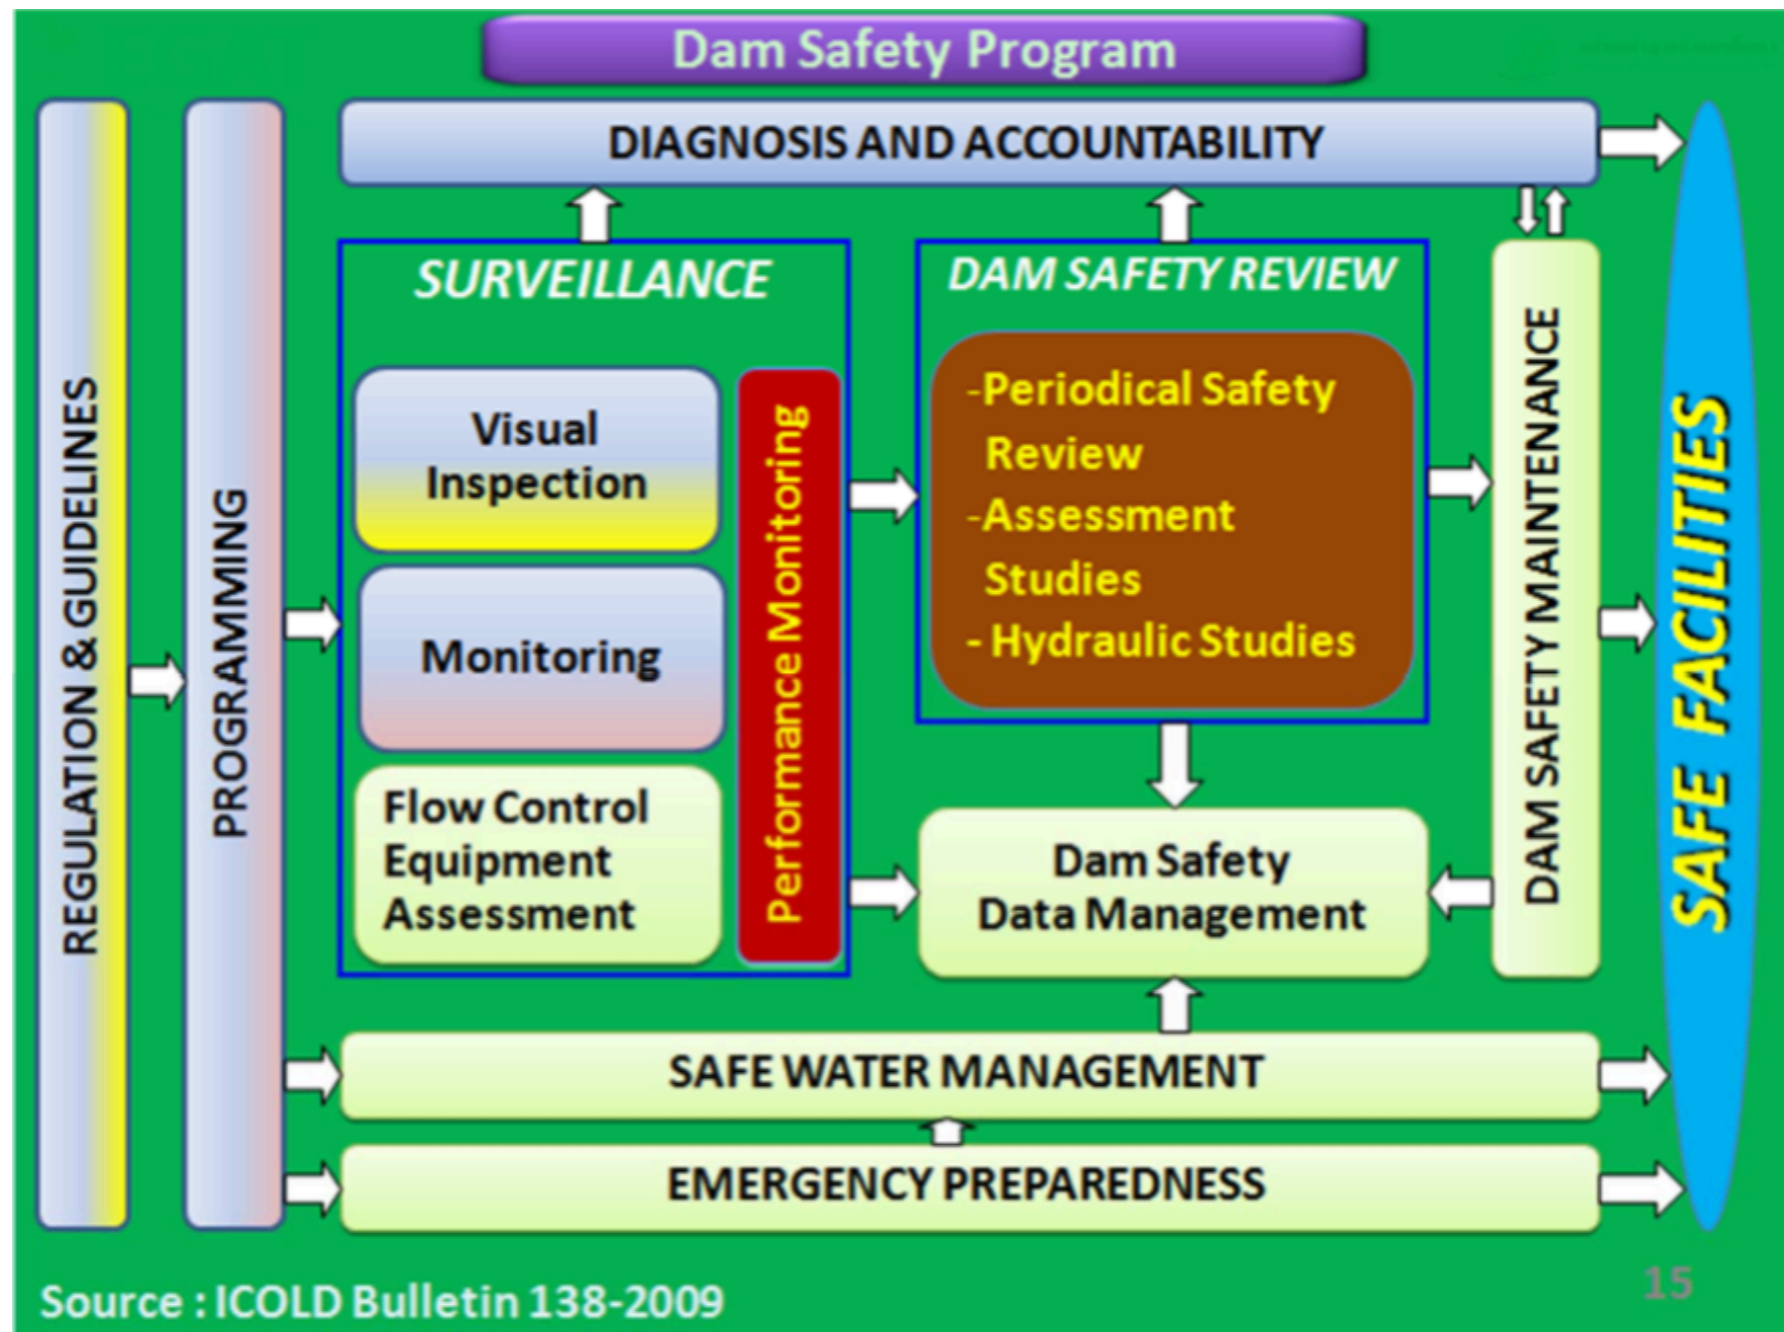

- Thailand
 - 4,000 dams
 - 35 large and medium dams under Electricity Generation Authority of Thailand (EGAT)
- Myanmar
 - 200 large dams
 - 2 hydropower projects by EGAT
- Lao PDR
 - 85 hydropower projects

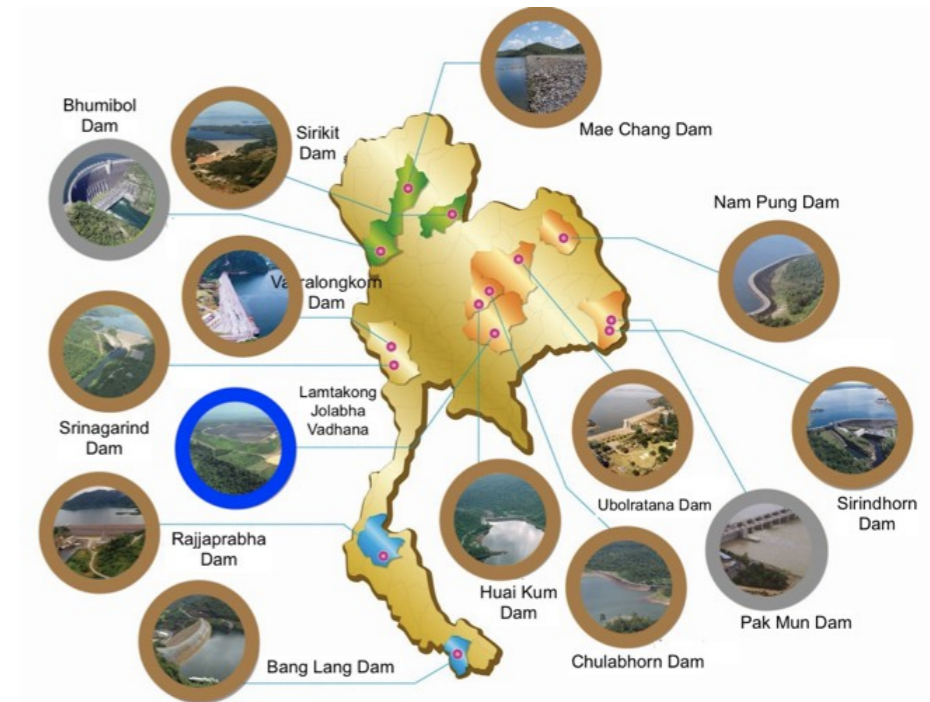

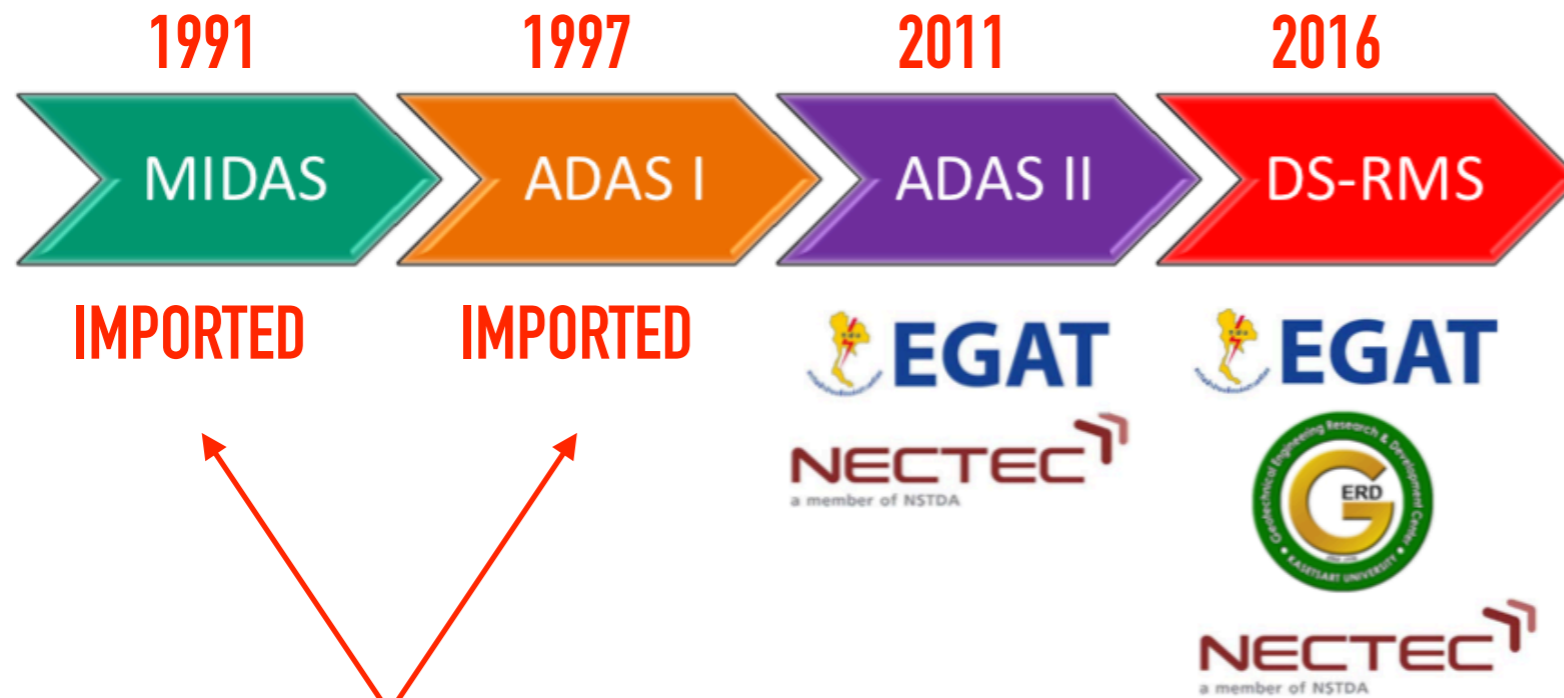

Source : Greater Mekong subregion information portal

DAM SAFETY PROGRAM RECOMMENDED BY ICOLD

- EGAT follow Dam Safety Program by International Commission on Large Dams (ICOLD)

DEVELOPMENT OF DAM MONITORING SYSTEM

- Turn-key solution
- Expensive
- Hard to maintenance
- Obsolete spare parts

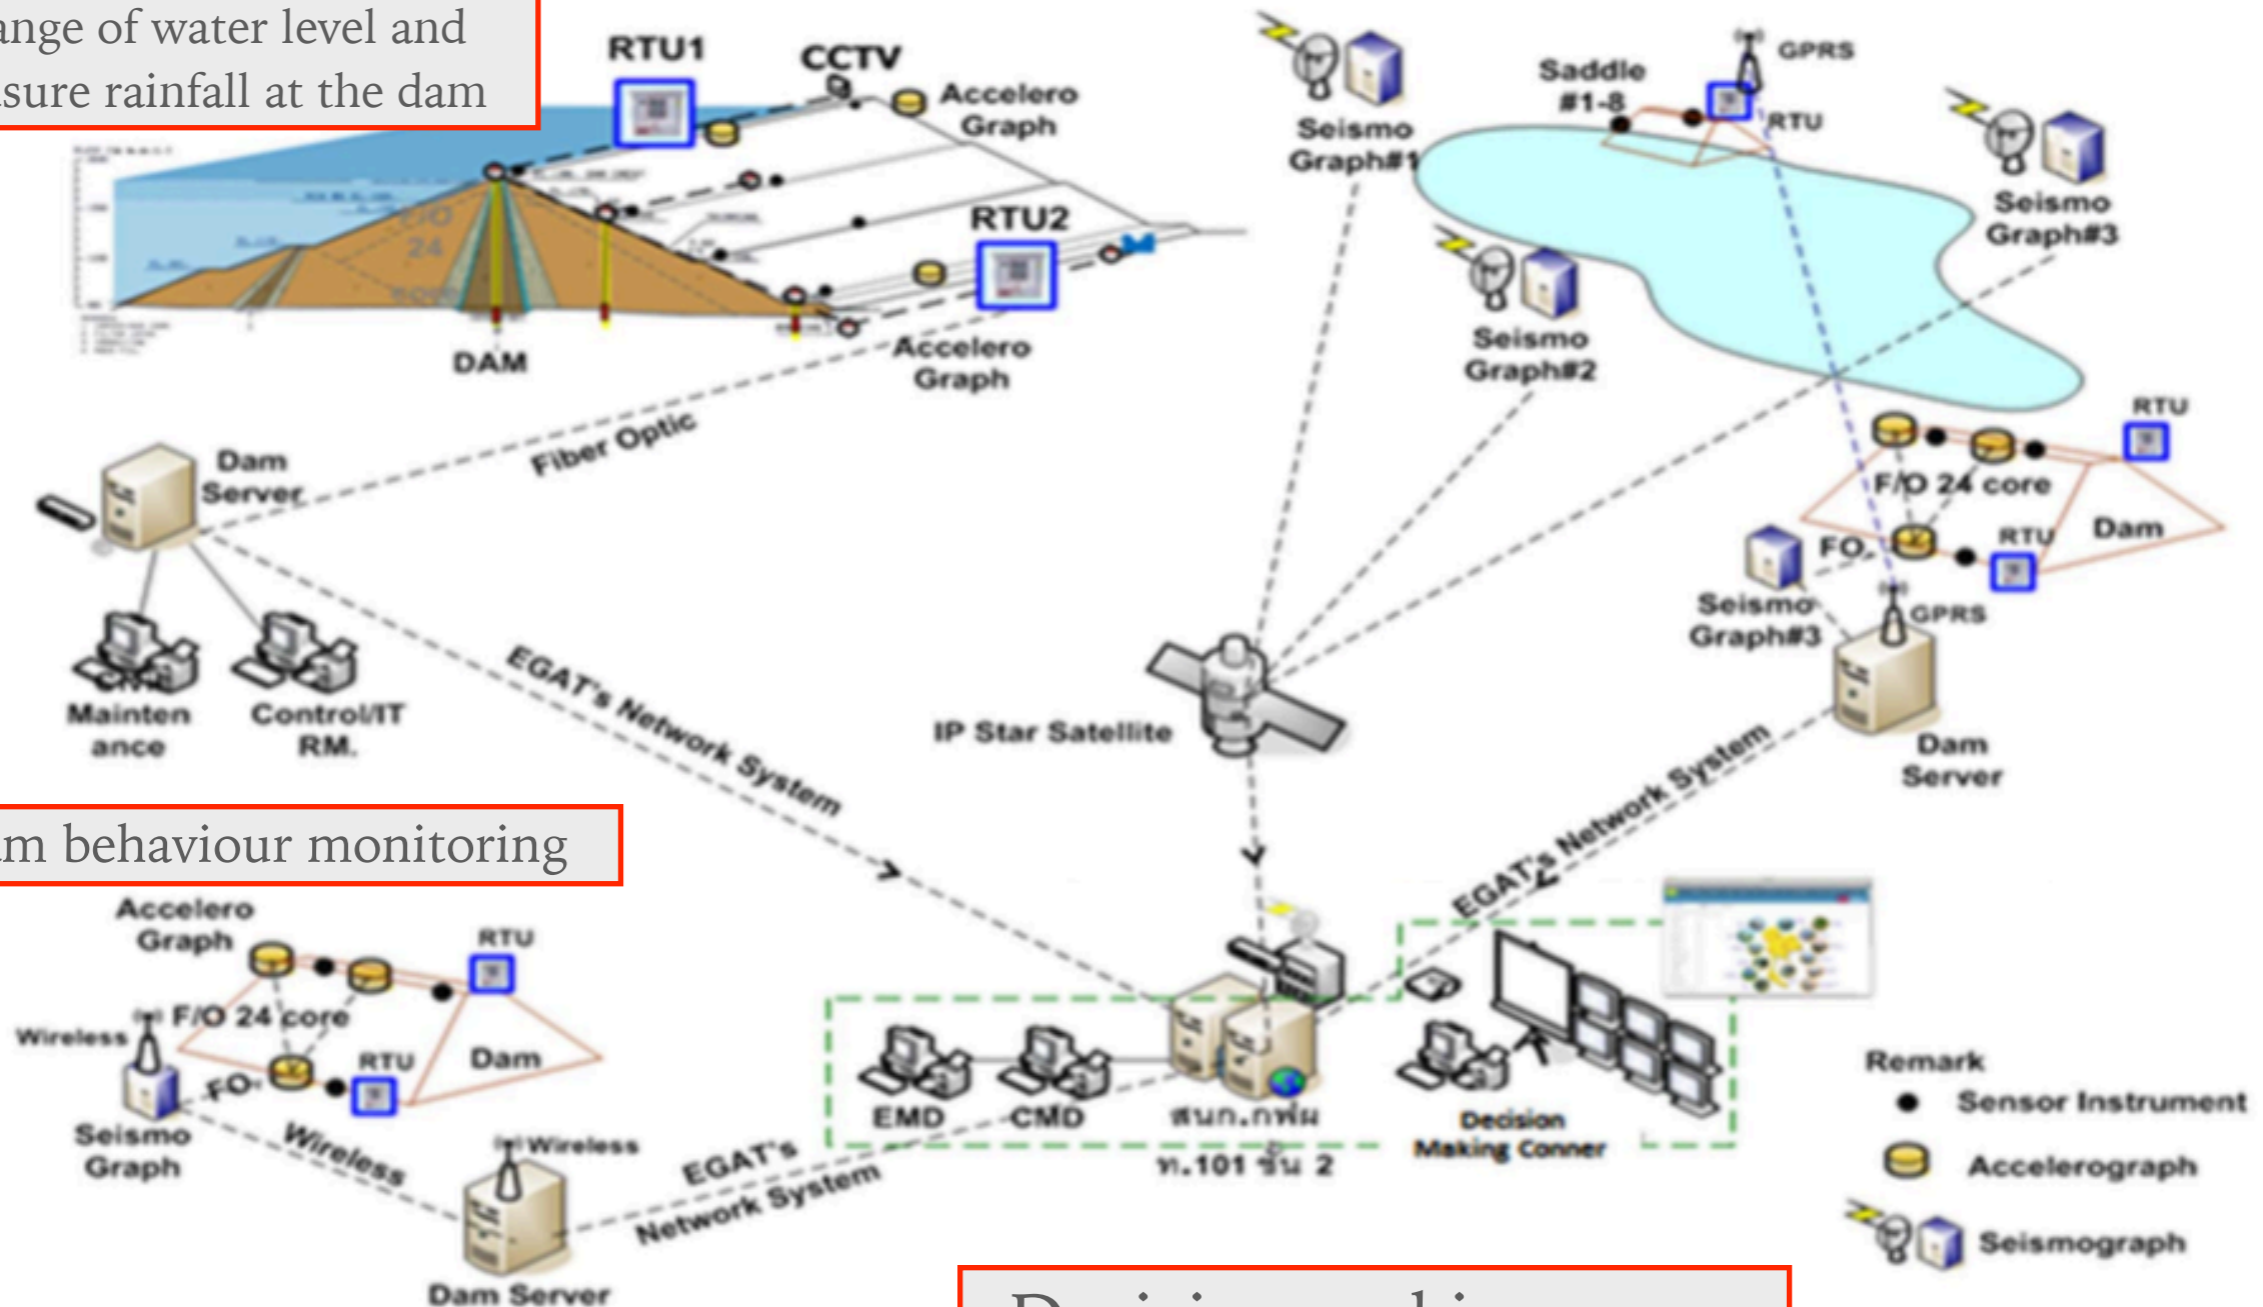

DS-RMS SCHEMATIC

Reservoir operation

Evaluate inflow based on change of water level and measure rainfall at the dam

Earthquake monitoring

Dam behaviour monitoring

Decision making room

DECISION SUPPORT SYSTEM

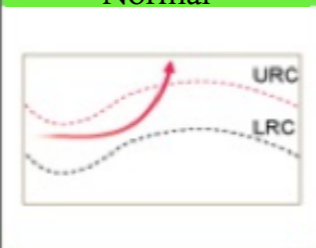

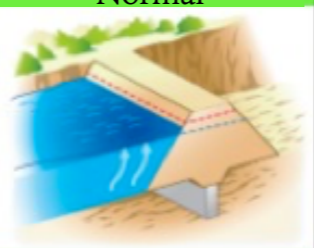

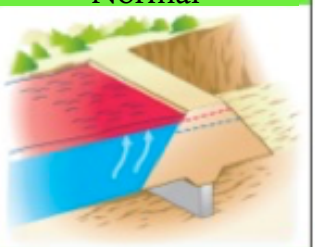

- Evaluate dam safety
- Display cause of problems

★ Expert system

Static condition

Normal	Normal	Normal	Normal	Normal
				
Seepage through embankment	Seepage through dam foundation	Seepage through embankment into dam foundation	Slope instability	Excessive crest settlement

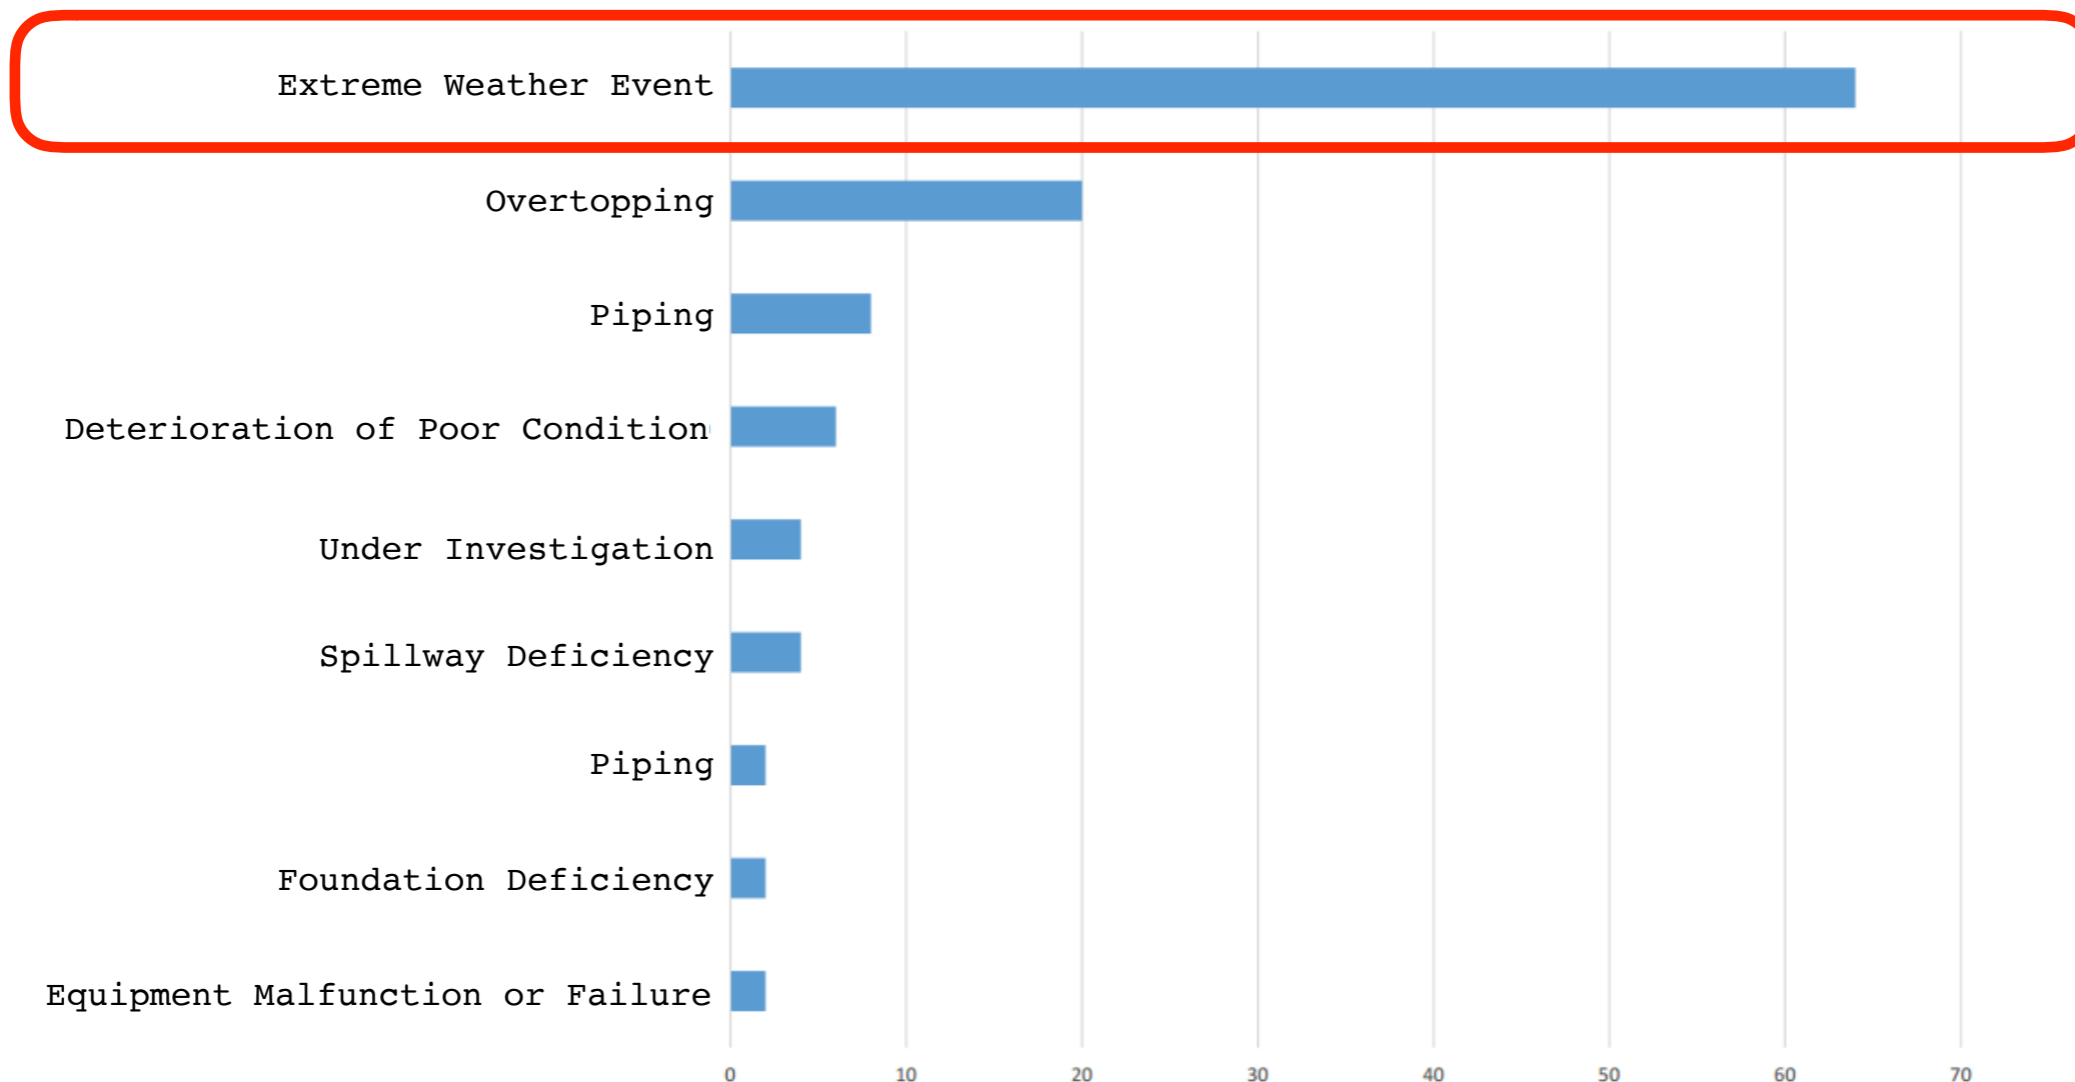

Flood condition

Normal	Normal	Normal
		
Water level can be over URC	Water level can be over NWL	Water level can be over MWL

CAUSE OF DAM FAILURE INCIDENTS, 2010-2015

- 60% come from extreme weather event
- Association of State Dam Safety Officials
- <https://damsafety.org/dam-failures>

ASDSO Incident Database - Dam Failure Incidents 2010 -2015

EXTREME WEATHER EVENT MONITORING

- Evaluating inflow based on change of water level and measure rainfall at the dam can be too late
- To forecast rainfall and storm by satellite images
- To monitor upstream water level for evaluating actual inflow by visual IoT cameras

OBJECTIVES

- To forecast rainfall and storm
 - Using HIMAWARI-8 satellite images
- To enhance inflow measurement system
 - Using visual IoT camera to monitor water level
 - Using new low-power long-range-communication tropical-environment weather station to measure rainfall around reservoir

OUTPUT

- An Intelligent Remote Monitoring System for Dam Safety platform for this region

- Improve dam safety operation in this region
